PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6+ years of experience building React/Next.js and Vue/Nuxt.js platforms, reusable component systems, and browser-extension frontend architecture for remote product teams. Worked on frontend systems for a Chrome extension listed with 40,000+ users, with focus on TypeScript, Shadow DOM, cross-context messaging, performance, testing, and maintainable UI boundaries. Owns production frontend work from ambiguous requirements through architecture, implementation, code review, and release-ready delivery. Experienced in asynchronous collaboration with US-based and international teams across product, design, backend, QA, and engineering leadership. Open to Senior Frontend Engineer roles with European and remote-first companies.

BEST FIT

- Senior Frontend Engineer roles in remote-first product teams
- React/Next.js and Vue/Nuxt.js production web application development
- Frontend systems for e-commerce platforms with 6,000+ stores, 5M+ users, and high transaction volume
- Browser-extension frontend architecture with TypeScript, Shadow DOM, and cross-context messaging
- Reusable component systems, Storybook workflows, and scalable UI foundations
- Frontend performance, maintainability, testing strategy, and developer-experience improvements

WORK EXPERIENCE

Senior Frontend Engineer - Sazito

Jun 2022 - Present | Part-time

Technologies: React, Next.js, TypeScript, Redux, REST APIs, Tailwind CSS

- Owned React and Next.js frontend delivery for e-commerce workflows across a platform supporting 6,000+ stores, 5M+ users, and roughly 10 trillion rial in monthly transaction volume.
- Standardized TypeScript component patterns across public and platform surfaces, reducing duplicate UI work and making feature delivery easier to extend.
- Refactored Redux and REST API integration flows in complex product areas, making state transitions clearer and lowering maintenance risk.
- Hardened performance-sensitive UI paths through targeted refactoring and modern tooling, creating faster and more reliable storefront experiences.
- Shaped frontend architecture choices for online-store and SaaS workflows, giving teams reusable foundations for long-term product growth.

Frontend Engineer - Jack Westin (US-based Remote Team)

Jun 2022 - Jun 2026

Technologies: Vue.js, Nuxt.js, Vue 3, TypeScript, Browser Extensions, Cypress, Storybook, Component Libraries

- Architected frontend systems for a Chrome extension serving 40,000+ users, designing Vue 3 and TypeScript UI modules for browser-integrated study workflows.
- Isolated injected extension interfaces with Shadow DOM, solving host-page style and DOM conflict risks while preserving predictable product UI behavior.
- Designed cross-context messaging between content scripts, background processes, and extension UI, creating reliable state flow across browser-extension contexts.
- Standardized reusable Vue and TypeScript component patterns with Storybook, giving extension and Nuxt platform surfaces a more consistent UI foundation.
- Strengthened Cypress-based testing and frontend scalability practices, reducing release risk for browser-extension, Nuxt.js, and component-library workflows.

Frontend Developer - Chamedoon

Apr 2020 - Jun 2022

Technologies: Vue.js, Nuxt.js, Vuex, TypeScript, JavaScript, REST APIs, Sass, CSS, HTML5, Git

- Delivered Vue and Nuxt production features in a growing customer-facing application, turning product requirements into stable frontend workflows.
- Created responsive Sass interfaces for mixed desktop and mobile usage, giving users consistent behavior across devices.
- Integrated REST API workflows with backend teams, aligning frontend state, error handling, and data flows with production contracts.
- Structured Vuex state and TypeScript patterns as the application grew, making complex UI flows easier to reason about and maintain.
- Refactored performance-sensitive views and debugging hotspots, reducing UI friction and increasing codebase reliability.
- Partnered with product and backend teams through releases, translating feedback into frontend fixes and user-facing enhancements.
- Established testing and issue-investigation habits in an early-stage codebase, creating a stronger foundation for long-term frontend maintenance.

SELECTED CASE STUDIES

Jack Westin Browser Extension

Problem: Students needed browser-integrated study experiences inside third-party educational platforms without fragile host-page coupling for a Chrome extension listed with 40,000+ users.

Responsibilities: Architected Vue 3 and TypeScript UI modules for extension surfaces at 40,000+ user product scale.; Designed content-script, Shadow DOM, and cross-context messaging flows for third-party page integration.; Standardized reusable extension UI patterns so product iterations could ship without duplicating browser-specific logic.

Technical Challenges: Third-party page integration, Shadow DOM isolation, State synchronization, Performance-sensitive browser contexts

Solution: Designed modular extension UI patterns that integrated with external pages while keeping product UI isolated, testable, and maintainable.

Impact: Created a more scalable browser-extension foundation for educational workflows and a more consistent experience across browser-integrated products.

Technologies: Vue 3, TypeScript, Browser Extensions, Shadow DOM, State Management

Sazito E-commerce Platform

Problem: Product teams needed scalable frontend foundations for online-store and e-commerce workflows across a platform supporting 6,000+ stores, 5M+ users, and roughly 10 trillion rial in monthly transaction volume.

Responsibilities: Owned React and Next.js feature delivery for e-commerce platform experiences.; Standardized reusable components and API integration patterns across storefront and platform surfaces.; Modernized legacy and newer React areas so product work could move with less architectural friction.

Technical Challenges: Reusable UI architecture, Redux state management, REST API workflows, Performance and maintainability

Solution: Designed reusable frontend systems and application patterns that carried multiple e-commerce product workflows.

Impact: Raised frontend scalability, consistency, and developer experience across high-traffic e-commerce platform surfaces.

Technologies: React, Next.js, TypeScript, Redux, REST APIs, Tailwind CSS

EDUCATION

University of Ilam, Iran

Bachelor of Software Engineering

Graduated: 2012

SKILLS

Frontend: React, Next.js, Vue.js, Nuxt.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS

State Management: Redux, Redux Toolkit, Pinia

Testing: Cypress, Playwright, Vitest, Jest

Tooling: Vite, Webpack, Storybook, pnpm, Git

Architecture: Design Systems, Component Libraries, Frontend Architecture, Browser Extensions, REST APIs, Performance Optimization

SELECTED ACHIEVEMENTS

- Designed browser-extension UI architecture for third-party educational platforms, keeping injected experiences isolated, maintainable, and ready for product iteration.
- Built reusable component systems across product surfaces, reducing repeated UI decisions and giving teams a more consistent delivery foundation.
- Modernized TypeScript, API integration, and state-management patterns in production codebases, lowering architectural drift as products scaled.
- Raised frontend delivery confidence with Cypress, Storybook, typed workflows, and performance-focused refactoring across React, Next.js, Vue, and Nuxt.js systems.
