PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6+ years of experience building scalable web applications, browser extensions, reusable component libraries, and modern frontend architectures. Specialized in React, Next.js, Vue, Nuxt.js, TypeScript, frontend performance optimization, and developer tooling. Experienced in remote collaboration with international teams and delivering production software used by thousands of users. Strong background in frontend architecture, testing strategies, design systems, state management, and maintainable codebases. Open to remote and long-term engineering opportunities.

WORK EXPERIENCE

Senior Frontend Engineer - Sazito

Jun 2022 - Present | Part-time

Technologies: React, Next.js, TypeScript, Redux, REST APIs, Tailwind CSS

- Scaled React and Next.js frontend features for e-commerce products with a focus on maintainability and long-term product growth.
- Standardized reusable UI components and frontend patterns used across multiple product surfaces.
- Improved performance, maintainability, and developer experience through refactoring, TypeScript practices, and modern tooling.
- Strengthened Redux state management and REST API integration patterns for complex product workflows.
- Contributed to frontend architecture decisions that supported scalable online-store and platform experiences.

Frontend Engineer - Jack Westin (US-based Remote Team)

Jun 2022 - Present

Technologies: Vue.js, Nuxt.js, Vue 3, TypeScript, Browser Extensions, Cypress, Storybook, Component Libraries

- Evolved production Vue.js and Nuxt.js applications used by thousands of MCAT students.
- Delivered browser extension features and embedded frontend experiences for third-party educational platforms.
- Expanded reusable UI systems, component libraries, and frontend infrastructure shared across multiple products.
- Improved frontend architecture, testing strategy, performance, and developer experience across production workflows.
- Collaborated remotely with a US-based cross-functional team to ship reliable frontend features in an active product environment.

Frontend Developer - Chamedoon

Apr 2020 - Jun 2022

Technologies: Vue.js, Nuxt.js, Vuex, TypeScript, JavaScript, REST APIs, Sass, CSS, HTML5, Git

- Shipped and maintained production Vue.js and Nuxt.js features across customer-facing application flows.
- Created responsive Sass-based interfaces that improved usability across desktop and mobile experiences.
- Integrated frontend workflows with REST APIs in close coordination with backend engineers.
- Strengthened Vuex state management and TypeScript usage as the frontend codebase grew in complexity.
- Improved performance, maintainability, and code quality through refactoring, debugging, and optimization initiatives.
- Partnered with product and backend teams to translate requirements into reliable, user-focused frontend features.
- Supported testing, issue investigation, and long-term maintainability for a production frontend codebase.

SELECTED CASE STUDIES

Jack Westin Browser Extension

Problem: Students needed reliable browser-integrated study experiences inside third-party educational platforms.

Responsibilities: Contributed Vue 3 and TypeScript extension UI features.; Supported content-script, Shadow DOM, and cross-context communication workflows.; Helped keep reusable extension UI patterns maintainable across product iterations.

Technical Challenges: Third-party page integration, Shadow DOM isolation, State synchronization, Performance-sensitive browser contexts

Solution: Implemented modular extension UI patterns that could integrate with external pages while keeping product UI isolated and maintainable.

Impact: Supported scalable browser extension delivery for educational workflows and improved consistency across browser-integrated product experiences.

Technologies: Vue 3, TypeScript, Browser Extensions, Shadow DOM, State Management

Sazito E-commerce Platform

Problem: Product teams needed scalable frontend foundations for online-store and e-commerce workflows.

Responsibilities: Contributed React and Next.js features for e-commerce platform experiences.; Standardized reusable components and API integration patterns.; Improved maintainability of legacy and modern React frontend surfaces.

Technical Challenges: Reusable UI architecture, Redux state management, REST API workflows, Performance and maintainability

Solution: Strengthened reusable frontend systems and application patterns that supported multiple e-commerce product workflows.

Impact: Helped improve product scalability, frontend consistency, and developer experience across platform surfaces.

Technologies: React, Next.js, TypeScript, Redux, REST APIs, Tailwind CSS

EDUCATION

University of Ilam, Iran

Bachelor of Software Engineering

Graduated: 2012

SKILLS

Frontend: React, Next.js, Vue.js, Nuxt.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS

State Management: Redux, Redux Toolkit, Pinia

Testing: Cypress, Playwright, Vitest, Jest

Tooling: Vite, Webpack, Storybook, pnpm, Git

Architecture: Design Systems, Component Libraries, Frontend Architecture, Browser Extensions, REST APIs, Performance Optimization

SELECTED ACHIEVEMENTS

- Enabled browser-integrated product experiences by contributing extension UI patterns for third-party educational platforms.
- Reduced duplicated frontend work by contributing reusable component libraries and UI systems shared across multiple applications.
- Improved long-term maintainability by strengthening TypeScript, state management, and frontend architecture patterns.
- Supported performance and developer-experience improvements across production React, Next.js, Vue, and Nuxt.js codebases.
