Dear Hiring Team,

I am writing to express my interest in Senior Frontend Engineer opportunities. I bring 6+ years of frontend engineering experience across React, Next.js, Vue, Nuxt.js, TypeScript, browser extensions, reusable component systems, and production frontend architecture for remote product teams.

At Sazito, I owned React and Next.js frontend delivery for e-commerce workflows across a platform supporting 6,000+ stores, 5M+ users, and roughly 10 trillion rial in monthly transaction volume. My focus included scalable UI foundations, reusable TypeScript components, Redux and REST API flows, performance-sensitive storefront experiences, and maintainable frontend architecture.

At Jack Westin, I contributed to Vue, Nuxt.js, Vue 3, TypeScript, and browser-extension products for a US-based remote edtech team. That experience included frontend systems for a Chrome extension listed with 40,000+ users, Shadow DOM isolation, cross-context messaging, Storybook component workflows, Cypress testing, and reusable UI patterns.

I am strongest in teams that need a frontend engineer who can move from ambiguous product requirements to reliable implementation, collaborate well across product, design, backend, and QA, and keep codebases easier to scale over time. I care about practical architecture, clear communication, readable code, testing discipline, and UI performance.

I would welcome the opportunity to discuss how my frontend architecture, product engineering, and remote collaboration experience can support your team.

Sincerely,

Mostafa Kazemi
